

CHATBOT

1. What is Chatbot?

A chatbot is a computer software created to mimic human communication through text or voice exchanges. They exist in a variety of forms, ranging from straightforward rule-based programs to intricate AI-powered systems.

2. Important characteristics of Chatbot:

Understanding natural language is the cornerstone. If you are vague or informal, the chatbot should still be able to understand the meaning and intent of what you are saying.

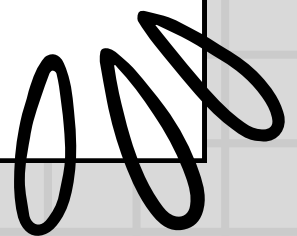

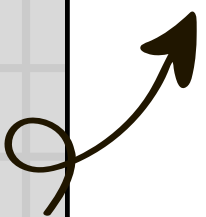

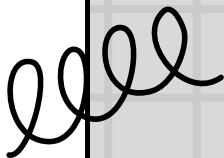

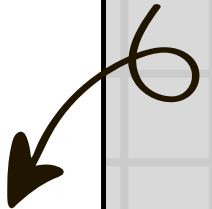

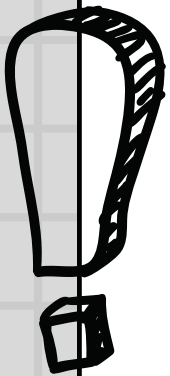

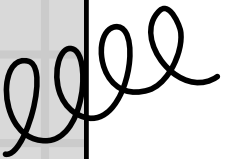

1. Problem-solving ability: It should be able to address your demands in addition to routine inquiries.

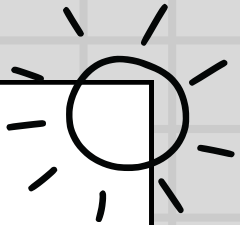

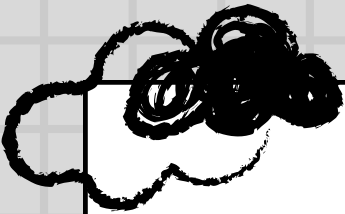

This includes arranging meetings, giving advice, and presenting pertinent solutions.

2. Personality that engages: A chatbot shouldn't seem artificial. The interaction is nice when a friendly tone is introduced and tailored to your preferences are observed.

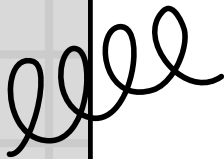

3. Seamless escalation: The secret is to know when to give up. When dealing with complex situations, a seamless transition to a human agent fosters trust and reduces irritation.

4. Constant learning: The most advanced chatbots are always becoming better. Ongoing value is ensured by using AI and feedback to improve its knowledge base and replies.

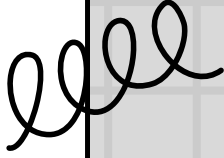

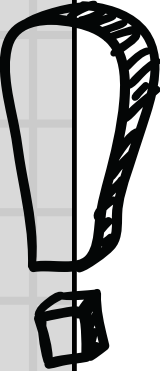

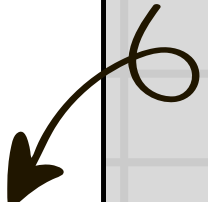

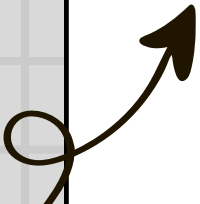

3. Application and Uses of Chatbot:

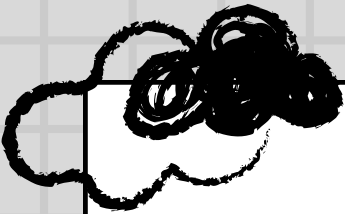

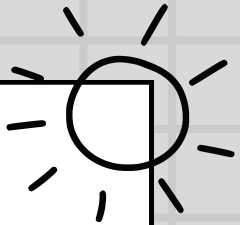

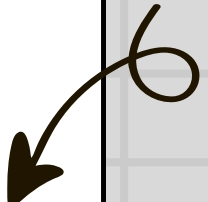

- 
- 
- **Customer service:** By managing routine chores like appointment scheduling, order tracking, refund processing, and account management, automated systems free up human agents to handle more complicated problems.
 - **Product discovery in e-commerce:** assisting clients in finding goods, evaluating costs, and coming to well-informed decisions.
 - **Education:** Virtual tutors: Giving students individualized instruction, responding to their inquiries, and providing assignment feedback.
 - **Finance:** Customer service: Responding to inquiries concerning loans, credit cards, and bank accounts.

Fraud detection involves keeping an eye on account activity to spot questionable transactions and warning clients about possible fraud.

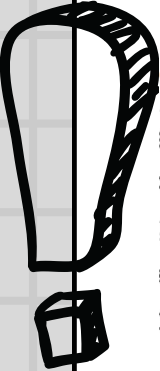

4. Steps to implement to design a Chatbot:

- Describe your objectives and purpose: My bio and background information.
 - Determine who your intended audience is: Individual chatbot
 - Select a platform: Python
 - Create the dialogue's flow: Provide branching paths and obvious decision points that are dependent on user input. Make the flow seem smooth and effortless.
- 
- 
- 

- 
- 
- 
- 
- Develop the material for your chatbot: Write dialogue that is both educational and interesting to your intended audience.
 - Recognize potential queries from users and offer thorough, pertinent responses. Throughout the talk, keep your voice and tone consistent.
 - Put natural language processing (NLP) into practice: Teach your chatbot to comprehend the purpose and meaning of user inquiries. Make use of AI and machine learning to make constant progress.
 - Evaluate and improve your chatbot: Get user feedback and make design iterations according on their suggestions. Keep an eye on your chatbot's

5.Designing of own Chatbot:-

+ Code + Text

[3] Start coding or generate with AI.

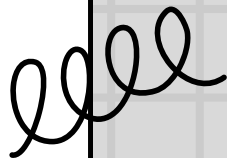

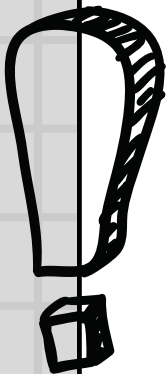

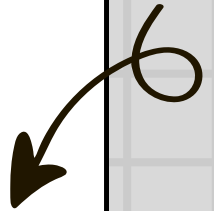

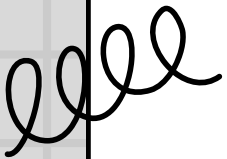

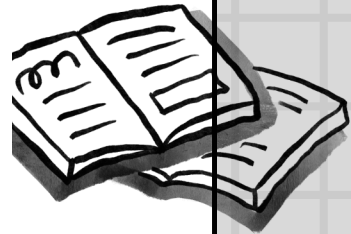

responses = {
    "hihi": [ "Hello:)", "Greetings:)" ],
    "how are you ?": [ "I'm doing well, thanks for asking:)" ],
    "what is your name ?": [ "My name is Durga Bhavani", "You can call me Bhavani", "I'm your AI assistant, Bhavani" ],
    "what can you do ?": [ "I can answer your questions about me" ],
    "when and where were you born ?": [ "On 27th of january in Tenali, Andhra pradesh" ],
    "what are your hobbies ?": [ "Drawing and listening songs" ],
    "what is your favourite hero name ?": [ "Vijay Devarakonda" ],
    "bye": [ " Bye;" ]
}

def get_response(user_input):
    user_input = user_input.lower()
    if user_input in responses:
        response = random.choice(responses[user_input])
    else:
        response = "I'm not sure I understand. Could you rephrase that?"
    return response

print("Bhavani's chatbot!")
while True:
    user_input = input("You: ")
    response = get_response(user_input)
    print("MD:", response)
  
```

```
... Bhavani's chatbot!  
You: hiii  
MD: Hello:)  
You: what can you do ?  
MD: I can answer your questions about me  
You: what is your name ?  
MD: I'm your AI assistant, Bhavani  
You: what is your favourite hero name ?  
MD: Vijay Devarakonda  
You: bye  
MD: Bye(;
```
